

The diagram illustrates the development of the human embryo from a zygote to a fetus. It shows the progression of organ systems and the influence of environmental factors. Key stages include:

- Zygote:** The starting point of development.
- Embryo:** The early stage of development, showing the formation of the neural tube, somites, and germ layers.
- Fetus:** The later stage of development, showing the formation of the heart, lungs, and other organs.
- Environmental Factors:** Factors such as nutrition, stress, and exposure to toxins can influence the development of the embryo and fetus.
